OVERVIEW

AI tool and creative process

Type of AI application

Google Gemini – a multimodal generative AI assistant (large language model) developed by Google, used through its web interface (gemini.google.com) in the default 'Flash' mode. Gemini has a built-in image generation model: it creates images from natural-language text prompts (text-to-image) and can edit or re-generate the previous image when given follow-up instructions in the same chat (conversational, iterative image editing).

Concept

For the theme "Majestic Creature" I chose a mythical guardian of the forest: a white stag whose antlers are made of starlight. The stag is a classic symbol of nobility and purity in European folklore; adding a celestial, cosmic element turns it into something larger than life.

Workflow

All prompts were written in English, in a single Gemini conversation, so that each step built on the previous image. I began with a minimal prompt and then refined one aspect at a time: (1) baseline, (2) fantasy concept, (3) composition and lighting, (4) art style and details, (5) detail polish, (6) final vertical hero composition. After every step I evaluated the result and decided what to improve next. The following pages show each prompt word for word together with the generated image.

Step 1

Step 2

Step 3

Step 4

Step 5

Step 6

STEP 1 OF 6

Baseline image

PROMPT

> *Create an image: a majestic white stag standing in a forest.*

RESULT & REFLECTION

I started with a deliberately simple prompt to see how Gemini interprets the theme. The result is a photorealistic white stag in a misty forest – a solid starting point, but it looks like a nature photo rather than a 'majestic creature'.

STEP 2 OF 6

Adding the fantasy concept

PROMPT

> *Make it more magical: turn the stag into a celestial guardian of the forest. Its antlers should be enormous and made of glowing starlight and swirling nebulae, with tiny stars drifting off them like fireflies. Keep the misty ancient forest, but make the stag the clear focal point.*

RESULT & REFLECTION

The core idea appears: the stag becomes a celestial being with nebula antlers and a soft glow. The composition is still flat and the stag looks small and passive.

STEP 3 OF 6

Composition and lighting

PROMPT

> *Now improve the composition and lighting: use a low-angle, cinematic shot looking up at the stag so it feels huge and regal. Place it on a mossy rock outcrop at the edge of a clearing at dawn. Golden god rays break through tall pine trees behind it, mist swirls around its hooves, and the starlight antlers cast a soft blue glow on its fur and the ground. Add a calm reflective pond in the foreground.*

RESULT & REFLECTION

Placing the stag on a rock with golden god rays and a reflective pond gives the scene depth and a heroic, almost monumental pose – this is where it starts to feel majestic.

STEP 4 OF 6

Artistic style and details

PROMPT

> *Great. Now transform it into a breathtaking fantasy oil painting in the style of epic concept art: rich painterly brushstrokes, deep teal and gold color harmony. Add faint glowing constellation patterns across the stag's white fur, a long flowing mane of silvery mist, and delicate wisps of aurora light in the sky above the trees. Its eyes should glow softly with calm, ancient wisdom. Keep the reflection in the pond.*

RESULT & REFLECTION

The biggest leap: a unified teal–gold palette, a painterly style, constellation lines on the fur, an aurora in the sky and a flowing misty mane. The image now has a unique identity.

STEP 5 OF 6

Final polish (detail pass)

PROMPT

> *Final polish: keep exactly this style, scene and color palette, but bring the camera a little closer so the stag fills more of the frame and feels truly majestic. Make the stag's face, antlers and constellation markings sharper and more detailed, balance the light so the gold sunrays and the teal starlight glow meet around the stag, and add a few small luminous moths and floating petals around it. Masterpiece quality, highly detailed, no text or watermark.*

RESULT & REFLECTION

Gemini added the luminous moths and floating petals, but kept the framing almost unchanged – the stag still does not fill the frame. This showed me that the composition needed a more explicit instruction.

STEP 6 OF 6

Final vertical composition

PROMPT

> *The previous edit barely changed the framing. Please generate a new vertical portrait version (3:4 aspect ratio) of this exact celestial stag as the final artwork: a closer, heroic low-angle view where the stag on the mossy rock fills most of the frame, its golden-teal starlight antlers spreading wide against the aurora sky, glowing constellation markings on its fur, flowing silvery misty mane, luminous moths around it, and its glowing reflection in the pond at the bottom. Same painterly fantasy oil painting style, teal and gold palette, highly detailed, no text.*

RESULT & REFLECTION

Switching to a vertical format and a closer, low-angle view finally made the stag the dominant element: the antlers crown the aurora sky, the mane flows across the light, and the reflection anchors the bottom. This is the final work.

FINAL WORK

The Celestial Stag

A white stag, guardian of an ancient forest, stands on a moss-covered rock at dawn. Its antlers are made of golden and teal starlight, constellations glow across its fur, and a mane of silvery mist flows in the light. Golden sunrays and an aurora meet above it, while its reflection shimmers in the still pond below – a calm, wise and truly majestic creature.
